WrapSynth

Trustless XMR Settlement

Disrupting Centralized Monero Bridges

The Competition: Centralized Bridges with Proven Demand

Wagyu

Hyperliquid

$700M

cumulative volume

Centralized bridge
Anonymous operator
No proof-of-reserves

Allegedly went dark

2% fee on XMR routes

WXMR

Solana / Jupiter

$12M/day

trading volume

Centralized wrap
Unverifiable reserves
26.3K holders

Trust the issuer

$662K liquidity

Instant Swaps

ChangeNOW, SideShift, etc.

1–4%

effective all-in cost

Principal inventory model
No orderbook
Unbenchmarkable rates

Custodial risk

$1 flat fee on small swaps

Why Now: The Market is Ready

$700M+ proven demand for synthetic XMR

CEX delistings accelerating

XMR to $4000 on Jupiter speculative demand proven

HyperEVM + Solana deployment venues live

Atomic swap tech proven and audited

Colosseum hackathon + Hyperliquid track

WrapSynth: Trustless Settlement Architecture

Ed25519 Atomic Swaps

Peer-to-peer settlement
On-chain secret verification
No trusted operator

Overcollateralized LP Vaults

USDe collateral (HyperEVM)
JitoSOL (Solana)
On-chain slashing

Multi-Chain Wrapped Tokens

HyperEVM (ERC-20 + HIP-1)
Solana (SPL)
Robinhood Chain (Q4)

Live on HyperEVM

Deployed and Verified

Contracts

wsXmrHub (Diamond)
VaultFacet
MintFacet
BurnFacet
LiquidationFacet
YieldFacet
RedStoneOracleFacet

Collateral

USDe via HyperLend
10% raw-USDe buffer
150/180/120 ratios
On-chain slashing
Trustless settlement

Security

lockHub() executed
lockDeployer() executed
EIP-1153 delegate context
633-line invariant suite
Two security reviews

Same settlement model, now on the chain where XMR demand actually trades

Demo: wrapsynth.com

Competitive Advantages

- Trustless atomic swaps vs “trust the operator”
- On-chain proof of solvency vs unverifiable XMR reserves
- Full ERC-20 composability vs dead-end HyperCore-only assets
- Multi-chain deployment vs single-venue lock-in

Real Revenue: Market Making + Protocol Fees

Market Making

5-figure profit

Q3 2026

Arbitraging XMR between Wagyu, WXMR, and instant swap services

Bulk from XMR $4000 run

on Jupiter

Protocol Fees

Mint/burn fees on atomic swaps

LP collateral yield (USDe supply APY)

HIP-3 perp fees (up to 50% share)

Spread capture between venues

The Spread Edge

Solana XMR operator partnership:

0% onramp fee

10bps offramp

vs Wagyu's 2%
vs instant swaps' $1

We fill the gap

Live Web App

WRAPSYNTH

Live demo:

wrapsynth.com

The Market is Immense

$700M
Wagyu cumulative volume
(Hyperliquid, Jan–Aug 2026)

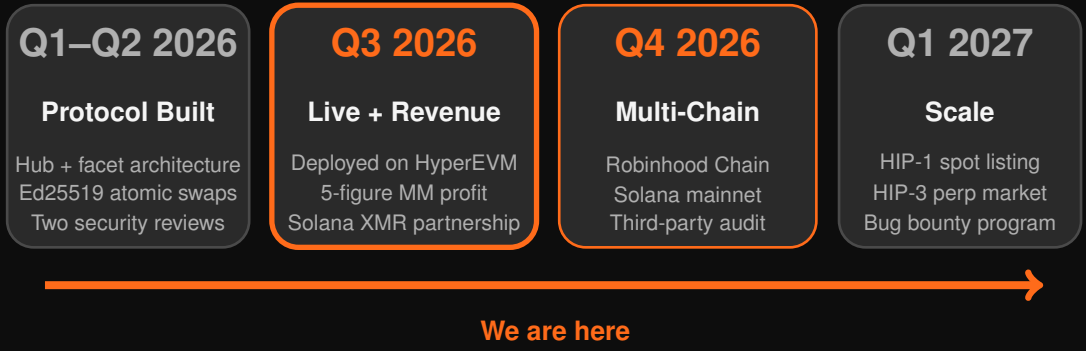

$12M/day
WXMR trading volume
(Solana / Jupiter)

Accelerat
CEX XMR delistings
(Binance, Kraken EEA, others

Demand is proven. The trustless solution doesn't exist yet.

WrapSynth is that solution.

Roadmap

Q1–Q2 2026
Protocol Built
Hub + facet architecture
Ed25519 atomic swaps
Two security reviews
Q3 2026
Live + Revenue
Deployed on HyperEVM
5-figure MM profit
Solana XMR partnership
Q4 2026
Multi-Chain
Robinhood Chain
Solana mainnet
Third-party audit
Q1 2027
Scale
HIP-1 spot listing
HIP-3 perp market
Bug bounty program
